

To whom it may concern,

I am pleased to write this letter of recommendation for AGMET, located in Bedford, Ohio. It is a respected leader in industrial materials recovery and recycling, known for its technical expertise, environmental responsibility, and commitment to helping manufacturers manage complex metal-bearing waste streams in a safe and efficient manner.

AGMET specializes in recovering valuable metals such as nickel, cobalt, and copper from industrial by-products. It provides materials management, logistics, and advanced recycling solutions that maximize resource recovery, improve efficiency, and support environmental and regulatory requirements.

A defining strength of AGMET is its commitment to sustainable innovation through its Recycle 100® philosophy, which focuses on eliminating landfill waste by converting industrial by-products into reusable resources. This approach reflects the company's strong dedication to environmental stewardship and long-term sustainability within the industrial sector.

AGMET is recognized for its experienced team of professionals who bring a high level of engineering knowledge and industry insight to every client engagement. Their ability to develop customized solutions and maintain strong client relationships has positioned the company as a trusted partner in resource recovery and environmental management.

I highly recommend AGMET for its professionalism, technical capability, and commitment to delivering reliable, sustainable recycling solutions that support both industry needs and environmental responsibility.

Sincerely,

Fred Carter
